Experience

Department of Computer Science, University of North Carolina at Chapel Hill — Chapel Hill, U.S.
Research assistant, supervised by Dr. Marc Niethammer — Feb 2019 – Present
- Research on machine learning algorithms for solving PDEs under various boundary conditions, with its application to quantitative analysis of CT/MR perfusion imaging and stroke diagnosis.
- Developed a data-assimilation approach (PIANO) which models the transport of the contrast agent in perfusion imaging by a variable-coefficient advection-diffusion PDEs. **[MICCAI-2020]**

IDEA Group, University of North Carolina at Chapel Hill — Chapel Hill, U.S.
Research assistant, supervised by Dr. Dinggang Shen and Dr. Pew-Thian Yap — Aug 2018 – Dec 2018
- Proposed a graph-convolution-based deep learning architecture that longitudinally predicts infant cortical growth, with spatial-temporal knowledge. **[IPMI-2019]**
- Researched on geometric deep learning and its application on infant cortical surfaces development.

Department of Mathematics, Shanghai University — Shanghai, China.
Undergraduate researcher, supervised by Dr. Shihui Ying — Sep 2016 – Jun 2018
- Researched on Riemannian spaces of shapes via the diffeomorphism group representation
- Helped teach graduate course *Shape Spaces*
